

Personal Use of ChatGPT: Verifiable Usage Report

This report summarizes verifiable, published findings on how regular (private/consumer) users use ChatGPT. It is based on large-scale anonymized usage analysis released by OpenAI and independent secondary summaries.

Overall Distribution of Consumer Usage

Category	Approx. Share of Messages
Practical guidance & how-to	≈ 28%
Writing (editing & personal communication)	≈ 27%
Information seeking / factual questions	≈ 18%
Health, fitness & self-care	≈ 6%
Technical help (e.g. coding)	≈ 4%
Self-expression & casual chat	≈ 2%
Relationships & personal reflection	≈ 2%

Key Observations

- The majority of consumer use is utilitarian rather than conversational.
- Non-work (personal) usage accounts for roughly 70% of total interactions.
- Explicit emotional or relationship-focused conversations are a small minority.
- Most personal use is embedded in practical tasks such as writing, planning, and advice-seeking.

These findings indicate that ChatGPT is primarily used as a general-purpose cognitive and communication aid for everyday life, rather than as a companion or emotional support system.
